

AIRPLANE

ARVIN

THE FIRST AIRPLANE

- THE FIRST AIRPLANE WAS INVENTED BY THE WRIGHT BROTHERS, WILBUR AND ORVILLE.
- THE AIRPLANE WAS INVENTED FOR EASY TRAVEL OVER THE WATER AND IT WAS FASTER. ANOTHER REASON IS THAT THE AIRPLANE COULD TAKE HUNDREDS OF PEOPLE OVER THE SEA FOR VARIOUS REASONS.
- THE AIRPLANE WAS INVENTED ON DECEMBER 17, 1903

A PROBLEM

- ENGINE FAILURE
- GAS LEAK
- TURBULENCE
- PILOT ERROR
- WEATHER CONDITIONS

A SOLUTION TO HELP IT

- ADDING AN ENGINE GUARD
- THE CONTROL TOWER WHICH GIVE PILOTS IN CONTROL WHEN IT IS THE SAFEST THE FLY
- MORE PILOT KNOWLEDGE

50 YEARS FROM NOW

- IT WILL BE MORE AERODYNAMIC
- MORE COMFORTABLE
- IT WILL BE CHEAPER AND MORE EFFECTIVE
- IT WILL USE SOLAR POWER

IMPROVEMENTS

I THINK THAT IF THE AIRPLANES USED LESS POWER FROM GAS AND HAD MORE LAY OVERS IT WOULD HELP WITH THE EARTH. DON'T YOU THINK THAT AIRPLANES ARE TOO BIG AND OVERWEIGHT LIKE HOW I THINK. IF WE COULD MAKE AIRPLANES THAT WAS MADE FROM STRONG MATERIALS THAT WAS LIGHT AND HAD SOLAR PANELS ON THE TOP, MORE PEOPLE WOULD BUY IT . A PLUS IS THAT IT WOULD BE CHEAPER AND MORE COMFORTABLE.
