

Piktochart Tutorial

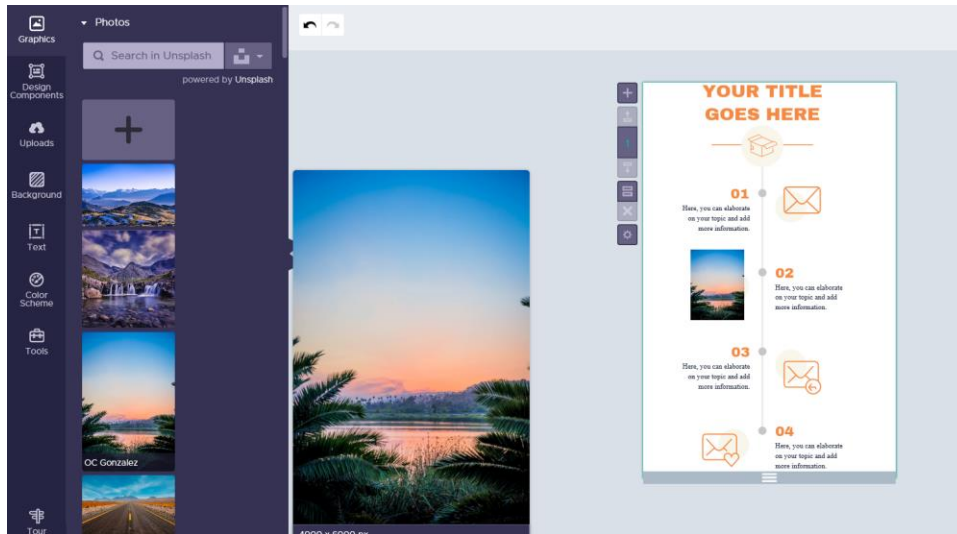

Step one: Go to the Piktochart website and click “Infographics” under the “Find Template” section. There will be an option to create your own infographic.

Step 2: To start off, go to “Design Components” and click timeline. There will be templates for you to use to revise, change the design and the wording.

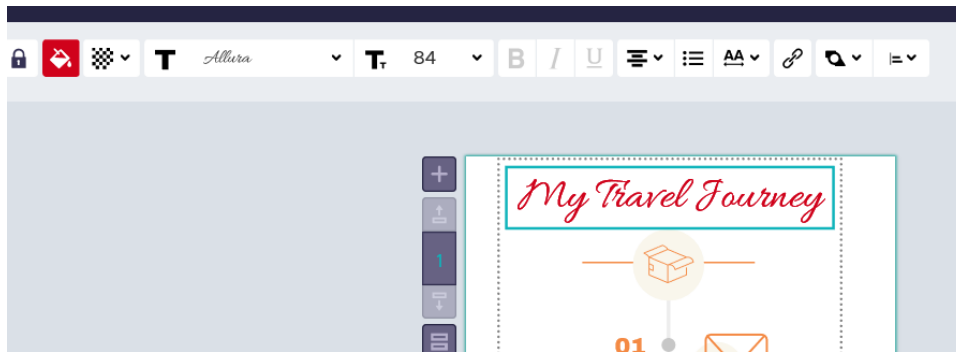

This is an example of a template that I chose.

Step 3: You can substitute drawings/icons with photos from google by going to the “Graphics” section and clicking photos.

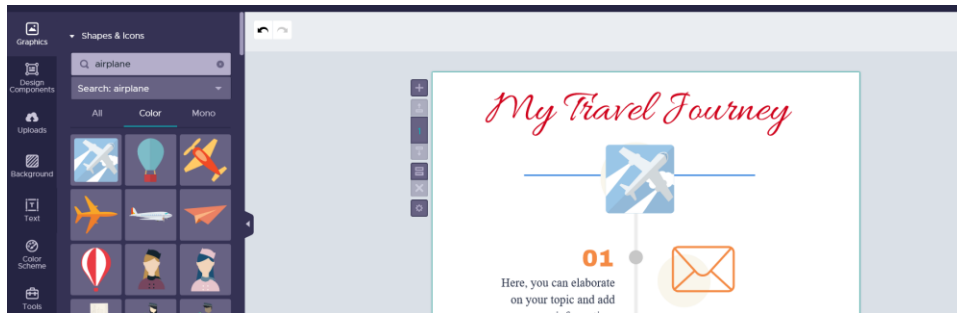

As you can see, I substituted the scroll icon to a photo of the beach.

Step 4: I have changed the color and the design of the font with the given tools on the top.

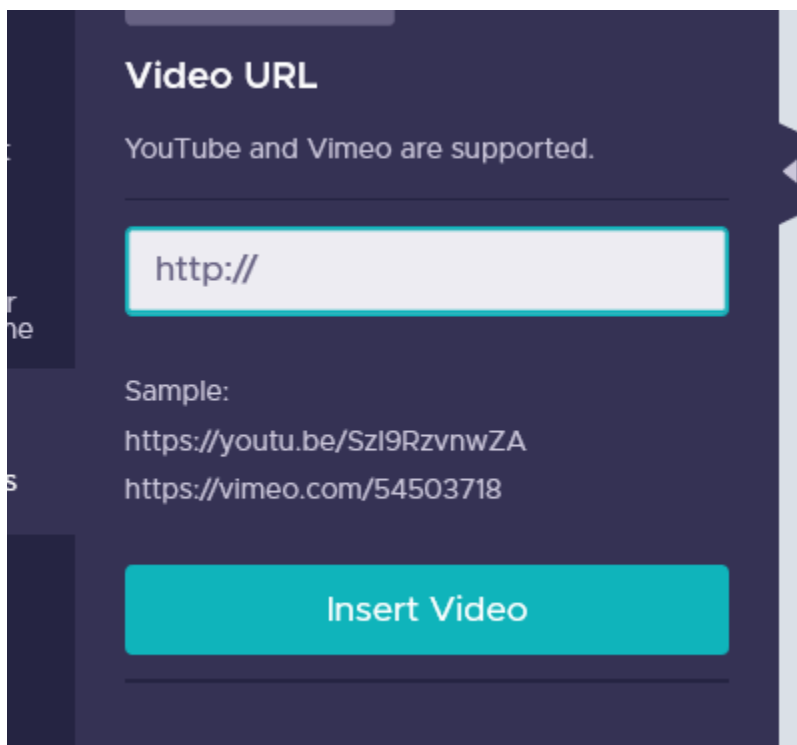

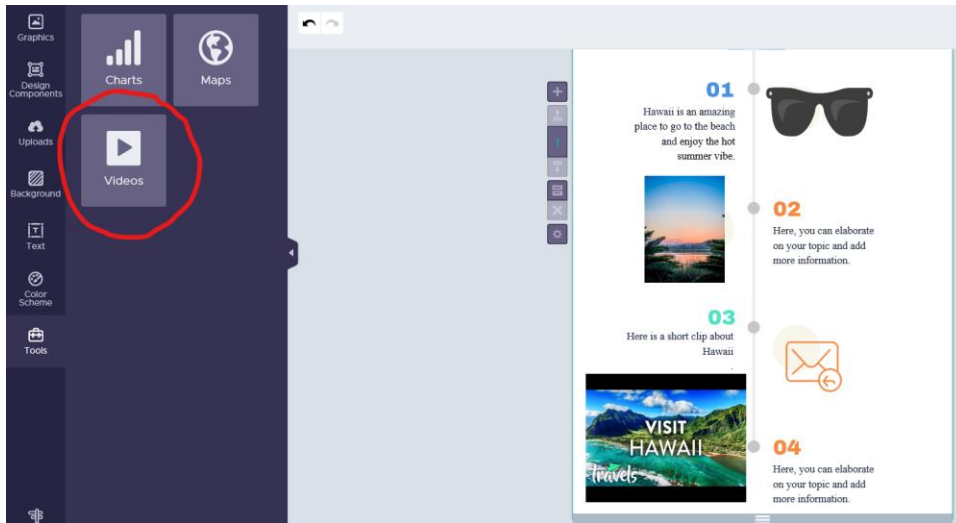

Step 5: You can switch out an icon to a different icon by going to “Shapes and Icon” under the “Graphics” section and searching for the icon that you want onto the search engine bar.

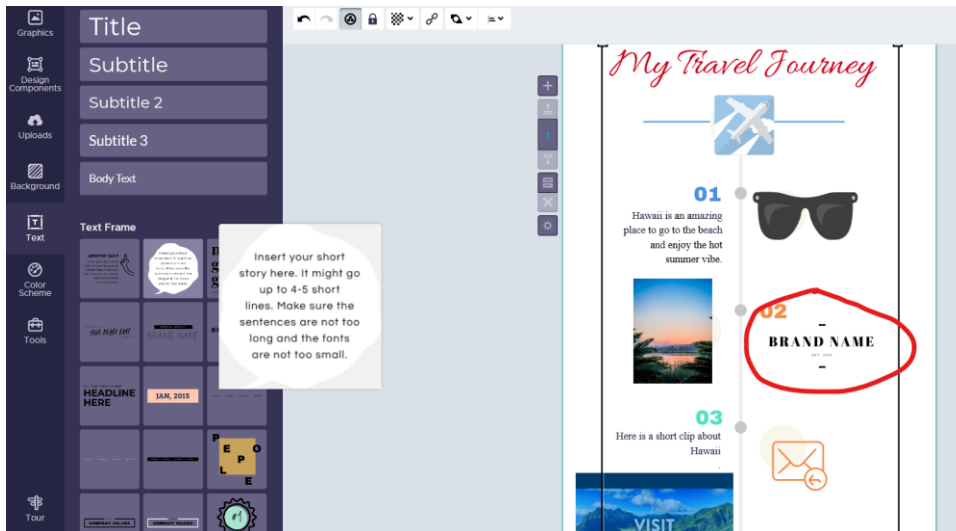

I swapped out the box icon and switched it to an airplane to match my travel theme.

Step 6: “Videos” under the “Tools” section allows you to paste a YouTube onto your infographic timeline. Copy the URL on YouTube and paste it onto the video URL bar.

Step 7: To change the design of the font for when you're writing a description, the "Text" section allows you to choose whichever design you want.

Step 8: I hoped this helps you create your project. Have fun 😊
