

Coca Cola

William Zheng

History

The product that was given the world best know taste was born in Atlanta Georgia on May 8, 1886. Dr. John Smith Pemberton was a local pharmacist. He placed a sale for five cents a glass as the soda fountain drink originally marked as a temperance drink and intended as a patent medicine.

History

- He made the drink for replacement for morphine, he was wounded in the war and didn't want to rely on morphine, so the drink helped him. He also pitched this drink to also help with nerve disorders and headaches, it originally was made with alcohol, but later he made it without alcohol. It was called coca cola because it was made with the coco plant leaf's and that's what they use to make cocaine.

What was the problem

- Well it had alcohol, so kids wouldn't buy it, but they took away the alcohol later in the 1900s and it didn't taste good at the start, so they added a lot of sugar to make it taste better and people started to buy them.

Consequences

- The classic Coca-Cola contains a huge amount of sugar. Too much sugar can have harmful effects on health and causes diabetes, obesity and tooth decays. Too much sugar increases blood pressure and causes heart attacks.

What solutions have been used to bring the innovation to what it is today

- Sugar help a lot because it didn't taste good at the start when they first made it. They used it as a medicine to help deal with pain. That's all I know.

Negative/Positive effects

- I mean it help stores to make money by selling the drinks, but it has a lot of sugar and some people has died from it. People say diet coke is better than coke but on this health study, it says that diet is worse than regular coke and can lead to healthy problems that is worst than normal coke.

The Future

- I think coke should be made from honey and not sugar because honey is healthier than sugar. They should get rid of the diet coke because its worse than the normal coke.
